

PrintStation

Inkjet printer unit system to use your existent system.

Features

- Integrate the printing process by docking the inkjet unit to the customer's conveyor equipment.
- Printing can also be triggered by a signal from the workpiece positioning sensor.
- Customize the printing width and the number of ink colors to meet your needs.
- Both sheet-fed (sheet feeding type) and roll media(roll-to-roll type) are available.

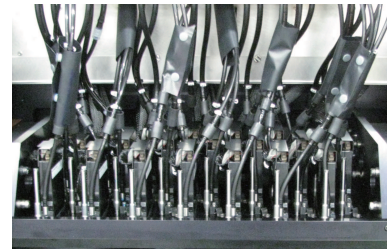

Carriage :

*Printheads are mounted here. Supports multiple printhead layouts and ink with various colors.

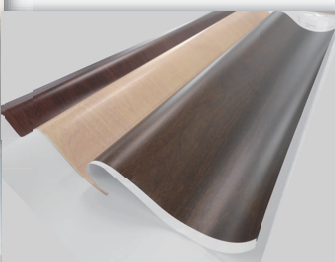

*We provide printhead layouts and carriage drive method depending on the printing specifications.

*Motor drive controls the motion between the print position and the wiping/capping position.

Customer's conveyor equipment :
Inkjet printing on workpieces on the product line.
